## Introduction to Zephyr

Zephyr for Jira facilitates test management capabilities for any Jira project. Using Zephyr, tests (test cases) can be created inside Jira, and executed whenever required, or as part of a test cycle. With some customization (using appropriate gadgets), detailed test metrics can be viewed and tracked.

Zephyr provides multiple deployment options:

- 1.Zephyr for JIRA Cloud
- 2.Zephyr for JIRA Server
- 3.Zephyr for JIRA Data Center

## Introduction to Zephyr

### Features of Zephyr for JIRA

- Native to JIRA allowing users to test right inside JIRA
  - Testing is integrated into the project cycles and it enables you to track software quality and make empowered go/no-go decisions.
  - Create, Plan, and Execute Tests
  - Create, view, and modify test steps and attachments for individual tests. Build test execution cycles, execute the tests, and link defects to specific tests.
  - Track Quality Metrics
  - Zephyr provides easy-to-use dashboard which provides testing metrics on the testing activities throughout every project.
- Zephyr for Jira facilitates test management capabilities for any Jira project. Using Zephyr, tests (test cases) can be created inside Jira, and executed whenever required, or as part of a test cycle. With some customization (using appropriate gadgets), detailed test metrics can be viewed and tracked.

## Introduction to Zephyr

The '**Create Issue**' module will appear with the following fields when creating a test case. The required fields for a test case are the following:

- 1. Project** – The name of the project that the test case is being placed after creation.
- 2. Issue Type** – The issue type for the test case (in this case, we'll select '**Test**').
- 3. Summary** – The name/title for the test case.
- 4. Reporter** – The name of the individual creating the test case.

## Introduction to Zephyr

The screenshot shows the Jira Test Management interface. The top navigation bar includes links for Dashboards, Projects, Issues, Boards, Tests, and Create. The current view is the Test Summary section of the SM Portfolio Project's TP board. The sidebar on the left provides access to various project management features like Backlog, Active sprints, Releases, Reports, Issues, Components, and Tests. The main content area displays a summary of test counts: Total Tests (33), Total Unexecuted (14), Total Executed (37), and Total Unscheduled (16). Below this, three tables provide detailed breakdowns: Tests By Versions, Tests By Components, and Tests By Labels.

Name	Count

## Introduction to Zephyr

2. This will display the '**Add Tests**' module below. The user can then use the drop-down list to search for all the test cases that need to be added to the cycle. You can also type the ID of the test case to add it to the list of test cases to be added. After selecting all the test cases that you want to be added to the testing cycle, you must select a person in JIRA who you are assigning the added test cases to. The person assigned is the initial person to execute the added tests in the testing cycle.

- This can be changed at a later time when individually executing a test case.

Click on the '**Add**' button once you've finished selecting and assigning all your test cases.
